

Lotions and Creams

Dry, cracked, flaking, scaling feet can be common, particularly in winter or dry weather. This may also be common with certain conditions like diabetes. You should always consult your doctor before using any medications that are unknown or new to you. Some recommendations for over-the-counter lotions and creams to treat these conditions are listed below. Any adverse reactions or allergic reactions should be treated immediately and you should discontinue use of the medication.

Kerasal Intensive Foot Repair
